## THE ROASTERY CAFE

We're housed in a beautiful historic building that began life as Sheehan's mechanical workshop in the 1940s, and has evolved through the years as businesses came and went.

The building was in danger of being condemned before we acquired it in 2010. After extensive repairs and renovations we have ensured this building honours its past

and will remain in our local community for many more years.

Look through the floor-to-ceiling glass walls between our café and roaster and you may notice the original engine hoist still hanging proudly from the rafters or perhaps signs of the original grease that is now varnished into the original hardwood floors. Just like it did back in the 1940s our building is once again providing careers and industry to an amazing community.
